

# InvoiceConnect for Microsoft Dynamics AX

## What is InvoiceConnect?

Shouldn't technology make your life easier? If you're using SAP Concur Invoice and Microsoft Dynamics AX, you don't want to waste time downloading data from one application, manipulating it and reuploading it to the other.

Thankfully, you don't have to. InvoiceConnect integrates the two systems and eliminates manual data processes – minimizing the time it takes to complete the invoice workflow and reducing the chance of making errors.

**Streamline your approval,  
payment and accounting  
process with InvoiceConnect**

## How does it work?

InvoiceConnect allows you to define the data mapping from Concur Invoice to AX. By providing a bi-directional connection between the two, it automatically pulls approved invoices from Concur and flows them into AX.

Ultimately, InvoiceConnect gives you a flexible, secure, cloud-based integration. You can easily maintain and synchronize vendor information, reduce the time it takes to approve and account for an invoice from a vendor, and automatically generate the appropriate documents and transactions in AX.

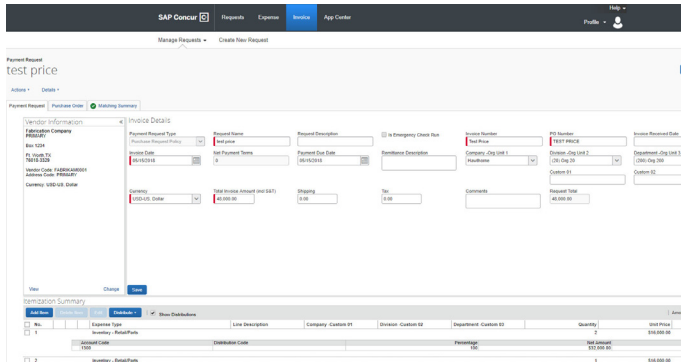

And as a prepackaged connector, InvoiceConnect gives you data-mapping control without costly custom development.

It also accommodates multi-entity deployments of AX, as well as multi-currency transactions.
